Reveal

Voyant Tools is a web-based reading and analysis environment for digital texts.

“upload” and upload the Craft narrative (na-slave-narratives / data / texts / CHOOSE A TEXT).

ill get a dashboard of panels that looks something like this:

ying the Panels

anel is initially a word cloud -- which isn't really so easy to read. The size of the word demonstrates how common it is. Click "Terms" tab to see the words listed in order of their frequency in the text. There is also a search bar here if you are looking for specific words. Click "Links" to see the frequency of words that occur next to each other. (We'll return to "Links" later.) If you want to learn more about what is happening in each of the views (or any other view on Voyant), click on the "?" at the left while in the view you are interested in.

g down, you see this panel.

Summary

Documents

Phrases

?

corpus has 1 document with 25,323 total words and 3,779 unique word forms. Created now.

frequent words in the corpus: **said** (123); **master** (108); **slave** (95); **good** (61); **free** (59)

:

you about the document you are examining. Unique word forms is means unique strings separated by spaces. In Voyant
 " and slaves" are different word forms. How might you prepare your corpus differently knowing this?

Il look at ways to combine word forms that are synonymous later.
 her two tabs -- document and phrases -- we'll also return to later.

top middle column, you will see the Reader. This is a copy of your document. If you search for words in the box at the bo
 will become highlighted in the text. You can see their frequency of occurrence across the document in the chart above the
 1 bar.

 es cannot breathe in England; if their lungs
 ive our air, that moment they are free;
 touch our country, and their shackles fall."
 ACE.
 NG heard while in Slavery that "God made of one blood all nations of men," and
 that the American Declaration of Independence says, that "We hold these truths
 : self-evident, that all men are created equal; that they are endowed by their
 tor with certain inalienable rights; that among these, are life, liberty, and
 ursuit of happiness;" we could not understand by what right we were held as "chattels."
 efore, we felt perfectly justified in undertaking the dangerous and exciting task

pages also shows you that you can search for words in different ways and can put more than one term into the search box. Click on the "?" next to the search bar, you will be truncation and other operators to collapse similar terms -- these also apply to places you see the search bar.

The top row at the right are trends. You can choose words to show how the frequency at which they occur over the duration of the text. The X-axis is the text divided into equal-sized segments. You can change the number of segments using the slider at the right.

Document terms tab shows the trend lines of many terms (and we will see it has another function when we look at more than one document).

Bottom left panel shows words in context -- by which it means the words that come before and after a chosen word form. But it is a different visualization of frequency over time (like the trends above).

all (2016) Privacy v. 2.1 (M3)

, you might notice that there words like “at,” “the,” and “is” are missing from these lists. That is because Voyant automatics as stopword list. A stopword list removes some words from the text analysis processes. To manipulate stopwords in Vo on the grey bar near the question mark and then click, the off-on-switch icon.

an test it without top words, with a user-defined list, or choose a specific language. To see what words are removed, click
You can also modify the stopwords list in this way.

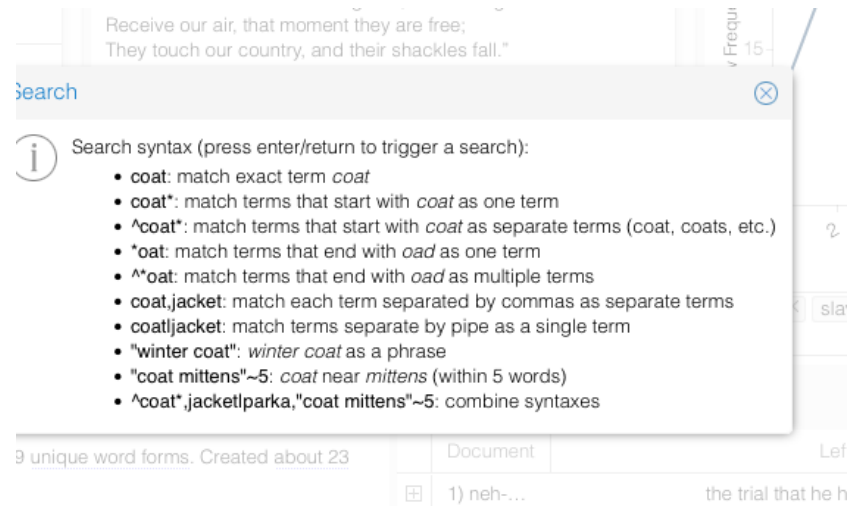

ions:

- What can you say about the text from the most frequent terms?
- Turn off the stopwords. What different questions can you ask or claims can you make?
- What can you say about the text from “Links”?

Choose a word or several words to look at in the trend lines. (The easiest way to do this is by putting a check mark next to them in the terms view panel.) What words did you choose? Why? And what did it tell you?

Change the document segment number in the Trends panel. Does it change your claim at all? (If it isn't showing as a slide, click the lined grey box icon on the bottom left of the panel.)

Look at a single word (like *slave*), then collate versions of the word into one term using different operators (*slave**) and look at the term as separate terms (*^slave**). Try other ways of collating (*sir | mr*) and comparing (*sir, mr*) related words. What different things do you learn by collapsing or comparing related terms? (If the operators aren't working, try Chrome.)

finish with the activity questions and don't feel like exploring the interface (or don't feel like doing it blindly), go to: <http://voyantjs.org/docs/#!/guide>

t: More than One Text

an also use Voyant to compare texts. Upload three or more texts.

• this, at the upload file structure, click one file then control or command click the others.

ne the documents tab on the bottom left and the document terms tab on the top right.

does comparing a few texts allow you to say differently?
